

-  100% windproof
-  100% waterproof
-  highly breathable

RAIN PROTECTIVE SUITS

RAIN PROTECTIVE SUITS are certified for using in bad weather conditions, offering protection from rain, wind and cold.

We produce comfortable and high quality rain suits using special materials. Our suits are produced of multilayer fabric made by Sympatex®. Middle layer is a non-porous membrane that is laminated between the outer waterproof fabric and the internal lining. Sympatex® membrane is 100% waterproof, 100% windproof and highly breathable. The perspiration in the form of vapor is easily transported away from the inside towards the outside. All seams are sealed thus additionally securing the suits from water penetration.

The suits are made to be comfortable for wearing over standard military uniform. Currently we offer a Jacket with Hood, and Trousers.

The Rain suits are made in all standard sizes with a weight of approximately 1.2 kg.
