

KT-EU, M84

Gun primer

The gun primer KT-EU M84 is electropercussion and it is intended for initiating of base propellant charge M88 which is introduced into the ammunition 125 mm for 125 mm gun on the tank M84 or T-72. The gun primer is airtight and safe in all conditions of transportation, storage and usage.

TECHNICAL DATA:

- Primer type electro-percussion
- Minimum conditions for action - impact energy (J) 2.1
- Voltage and time of action of the current pulse (V/s) 20/0.004
- Electrical resistance of the circuit (Ω) 1 to 3.6
- Primer height (mm) max 24
- Primer diameter (mm) max $\varnothing 30$
- Thread (mm) SpW 27.178 x 14 pitches
- Powder black powder No7
- Powder mass (g) 1.35
- Primer mass (g) 85
- Operating temperature ($^{\circ}\text{C}$) -30 to +50
