

# BALLISTIC SHIELD LEVEL III

Shield designed to protect users during high-risk actions. The specially designed handle allows the shield to be held in multiple positions, longer handling time without tiredness and easier movement. Optional possibility of marking the shield with an inscription at the request of the customer. Handle for horizontal and vertical holding of the shield adapted for carrying in the right or left hand. Shoulder strap for better redistribution of shield weight and reduction of arm tiredness. The shield is provided with a visor ballistic protection level III, for terrain observation without direct exposing to danger. It could be produced in various dimension on the customer request.

Optional: possibility of adding flashlight.  
 Produced in coordinate with NIJ STD 0101.04 - Level III.  
 Standard dimension 800x500mm.

Shoulder strap
