

FIREFIGHTER WORKING SUIT FDW-9

Firefighter suit FDW-9 is made of high-technology DuPontTMNomex® fabric, and it protects from short lived exposure to open flame. It is intended for the users that participate in fighting forest fires.

The suit is designed according to its purpose, it is comfortable and easy to maintain. The suits are marked with incombustible yellow and grey reflective tapes for easier spotting the user when visibility is reduced.

FDW-9 Blouse is of a long style, buttoned with special zipper for fast donning and doffing. It also has additional buttoning with protective flap and incombustible Velcro tape. Raised collar with flap provides protection for the neck area. There are two pockets with zippers at the chest height and two pockets with flaps in the waist area.

FDW-9 Trousers are with the waist that is closed with button. There on the waist are sliders for the belt as well as larger sliders for the girdle. There are two sidelong pockets in the waist area. There are reinforcements in the form of additional layer of fabric on the knees and on the buttocks area. Hose openings may be adjusted by means of filet and Velcro tape.

Firefighting working suit FDW-9 is made of DuPontTMNomex® fabric with a weight of 210g/m² and complies with EU directives and standards:

- 89/686/EEC – Appendix II
- EN 340
- EN 15614:2007, A1+A2
- EN 11612:2008 (code A1+A2, code B1, code C1)
