

M97

Ballistic helmet

The M97 is a PASGT-design helmet that has become a standard part of infantry equipment in many armies. The helmet can be produced with either three or six-point suspension/retention system, which provides space between the head and inner helmet surface, thus reducing the trauma from the blow. Also, this space enables ventilation.

Product codification according to NATO standard
 STANAG 3150 i 3151.
 NSN: 8470-73-000-0096

TECHNICAL DATA:

SIZE	HEAD SIZE(cm)	WEIGHT(g)	PROTECTION LEVEL NIJ STD 0106.01	V50 (m/s) STANAG 2920
