

NBC SUIT

In order to satisfy high demand for protection against different types of weapons for mass destruction, including chemical warfare agents, the Company has produced the NBC SUIT 600200.

Applying scientific innovations, technical experience and knowledge we have produced a suit that offers necessary protection against liquids, vapors, and aerosols carrying all types of chemical warfare agents, and still providing comfort to the user.

The NBC suit OFZ M 2000 is intended for multiple uses by personnel working under conditions of chemical warfare vapors and gases. In addition, it offers single use protection against chemical warfare drops, thermal impulse of nuclear exposure, or drops of napalm chemicals.

The suit consists of:

- Jacket with hood
- trousers
- transportation bag

Total weight is 3.0 kg. The suit is made of a two-layered material, where the outer layer is a mixture of cotton and synthetic, treated to be hydrophobic and oil-repellent. The suit is made in all kinds of camouflage patterns providing high camouflage characteristics in visual and IR part of the EM spectrum.

The inner layer is made of a special filter material (Saratoga), the top quality fabric of this type in the world.
