

PORTABLE CELLULAR JAMMER

Portable cellular jammer is a high quality jamming equipment for mobile communications. This cell phone jammer unit is intended for blocking all mobile phone types within designated indoor or outdoor areas. Its unique design combines effective jamming and strict compliance with international standards of safety and electromagnetic compatibility.

The portable cell phone jammer is a 'plug and play' unit, its installation is quick and its operation is easy. Once the cellular jammer is operational, all mobile phones present within the jamming coverage area are blocked, and cellular activity in the immediate surroundings (including incoming and outgoing calls, SMS, picture sending, etc.) is jammed.

BASIC TECHNICAL DATA

- Frequency range: LTE (791-821MHz), GSM900 (925-960MHz), DCS1800 (1805-1880MHz), UMTS2100 (2110-2170MHz)
- RF Power: 2W per band
- Signal type: sweep/multisweep
- Power supply: 230Vac/12 Vdc/battery 12 Ah
- Autonomy: 2h (@full output power)
- Control/programming: RS232
- Environmental conditions: Waterproof, -5°C to +40°C
- Antenna type: directional (internal) / omnidirectional (external) or their combination.
