

# L-128-04H

## Helicopter rocket launcher

L128-04H Four-barrel rocket launcher (honeycomb structure) is intended for launching of non guided rockets BR-VZ 128 mm M15 from a helicopter equipped with „single channel“ wiring and equipment for launching the unguided rockets.

The launcher provides separate launching of rockets BR-VZ 128 mm M15.

### Tehcnical data:

- |  |                    |
|--|--------------------|
| • Barrel:                              |                    |
| caliber                                | 128 mm (+1.0/-0.5) |
| length                                 | 2000 mm            |
| • Dimensions:                          |                    |
| length                                 | 2308 ± 5 mm        |
| diameter                               | 382 ± 2 mm         |
| spacing from the front hook to the top | 1002.5 mm          |
| spacing between the hooks              | 250 mm             |
| • Mass:                                |                    |
| of the empty launcher                  | 88 kg ± 2kg        |
| of the loaded launcher                 | 288 kg ± 2kg       |
