

ESD-MD-02-01 Setter

ESD MD-02-01 is autonomous electronic device intended for setting of the proximity fuze MBU, M18-D.

Technical characteristics :

Purpose

- Setting function and parameters of the proximity fuze MBU, M18-D

Function and parameters:

- Blocking time (time when proximity sensor starts transmitting signal).
Blocking time should be set up more then 2/3 time of flight.
- Impact function
- Store mode

Power supply:

- Primary battery (replaceable) - more than 50000 settings without replacing battery

Built in functions:

- non-contact two way communication (writing and reading)
- OLED Display
- Light and sound indication of setting
- Low battery indication
- Auto shut down
