

WATER TANKS AND VESSELS

Collective protection

Water vessel, 20 dm³

This water vessel is to be carried on the back and is intended for individual transportation of water to waterless areas. It holds water in the quantity of up to 20 liters.

Water vessel, 100 dm³

It is intended for the storage of drinking water in the quantity of up to 100 liters. It takes two persons to carry the vessel since it has fitted handles. The vessel is filled up by means of water supply devices or accessories.

Water tanks, 300 dm³ and 500 dm³

They are intended for temporary storage and transport of drinking water. The set of straps allows the handling and carriage of the tanks by motor vehicle or by helicopter.

Water tanks, 1500 dm³

The RVN-1500 water tanks are used for supplying water to building sites, ships and other floating objects, mountainous and inaccessible terrains, as well as for extinguishing small-scale fires. As soon as the tanks are filled up with water, they are to be transported by motor vehicle or by helicopter.

Water tanks, 4500 dm³

The RVN-4500 water tanks are intended for the storage of high quantities of raw or filtered water in the areas lacking in water. They are mainly used in building sites which are far away from the water source, or in the areas with insufficient water capacity. These water tanks are open type and stationary. Shelf life of original packaging in the prohibited conditions of storage is 10 years.
